

Database Project

Members: Malik Stewart, Jordan Thomas, Rickelle Jones

- The grade book needs to keep track of students, courses, grade categories, assignments, and grades.
- Each course is defined by its department, course number, course name, semester, and year. Additionally, courses are structured with various categories for assignments, including participation, homework, tests, and projects.
- Each category has a name and a weight, which goes into how much an assignment is worth
- Each category can have many assignments, and each assignment has a name, and a categoryID to verify which category of assignment it falls into

- The grade book tracks each student's grade for every assignment by using a combination of the student's ID, the assignment's ID, and the category's ID to organize all the data.

Task 2-12 and README:

This [GitHub Link](https://github.com/ChristianASC5/DatabaseProject): <https://github.com/ChristianASC5/DatabaseProject> is for the repository that contains SQL with the commands for each task and our README file.
